GAZMEND SHEHU

+355 69 8796460 • shehu.meni@gmail.com • LinkedIn • GitHub • Portfolio

Education

University of Belgrade — School of Electrical Engineering Belgrade, Serbia
B.S. in Software Engineering
Relevant Coursework: Operating Systems · Concurrent & Distributed Programming · Algorithms & Data Structures · Databases · Computer Networks · Software Testing · Computer Security · Internet Applications Programming · OOP

Experience

ULUS — Association of Fine Artists of Serbia Belgrade, Serbia
Full-Stack Developer March 2024 – September 2026
- Built a production art management platform for ULUS, serving ~3,500 member artists with distinct portals for curators, administrators, and public visitors — covering artist profiles, artworks, and exhibitions.
- Developed a MERN stack REST API (MongoDB, Express, React, Node.js) with TypeScript, JWT authentication, and role-based access control.
- Containerized the full stack with Docker for consistent, reproducible deployment across environments.

Levi9 Technology Services Belgrade, Serbia
DevOps Intern September – December 2023
- Authored CloudFormation templates for DynamoDB tables and Lambda functions, making environments reproducible with a single deploy command.
- Built CI/CD pipelines in Bitbucket and GitLab; containerized applications with Docker and managed orchestration with Kubernetes.

DXC Luxoft Serbia Belgrade, Serbia
GPU Computing & Embedded Electronics Intern March – June 2023
- Optimized GPU algorithms for computational workloads, reducing processing time by 30%.
- Applied performance-oriented coding techniques while collaborating with cross-functional CUDA engineering teams.

Projects

Blockchain Store Management System 2025
Python · Flask · MySQL · Solidity · Web3.py · Docker
- Four Flask microservices with MySQL and Ethereum escrow contracts supporting installment payments and role-based access control.
- JWT authentication, Docker Compose orchestration, transactional CSV ingestion pipeline, and an automated HTTP test suite.

Polymarket Weather Market Arbitrage Platform 2026
Python · asyncio · REST APIs · pytest
- Built an async trading engine over Polymarket's 51-city temperature markets (~2,750 open markets), fusing NWS observations and Open-Meteo ensemble forecasts to drive decisions across four strategies.
- Structured as ports and adapters — strategies are pure functions behind typed protocols, with all I/O isolated in adapters; 1,044 hermetic tests run offline against recorded API fixtures in ~43s.
- Engineered correctness end to end: CLI-gated live orders, an on-chain cash guard, an fsynced append-only journal with per-order reconciliation, Decimal arithmetic throughout, and timezone-aware settlement date resolution.

RISC-V Operating System Kernel 2025
C++11 · RISC-V Assembly · QEMU
- Multithreaded monolithic kernel: thread management, preemptive scheduling, synchronization primitives, sleeping, and console I/O.
- First-fit heap allocator with block coalescing and double-free protection; trap/interrupt handling for syscalls, timer wakeups, and semaphore scheduling.

Technical Skills & interests

Programming— Python, TypeScript, JavaScript, Java, C/C++, SQL, Solidity
Frontend — React, Angular, HTML & CSS
Backend — Node.js (Express), Flask, Django, Spring Boot
Databases — MySQL, MongoDB, DynamoDB, Cassandra
Cloud & DevOps — AWS (EC2, Lambda, CloudFormation), Docker (Compose), Kubernetes, GitLab
Practices — Microservices, REST APIs, WebSockets, TDD, Agile
Language — Albanian (native), fluent in English and Serbian
